

Latest schedule lead-time is getting worse

Metric: Latest Vessel Schedule – ATD (calendar days)
60 B/L · voyage-equal AVG (ATD + schedule date)

NOV 2025 AVERAGE

47.0 d

2 sailings · both 47d · 5 B/L

FEB 2026 AVERAGE

55.4 d

5 sailings · range 48–76

CHANGE

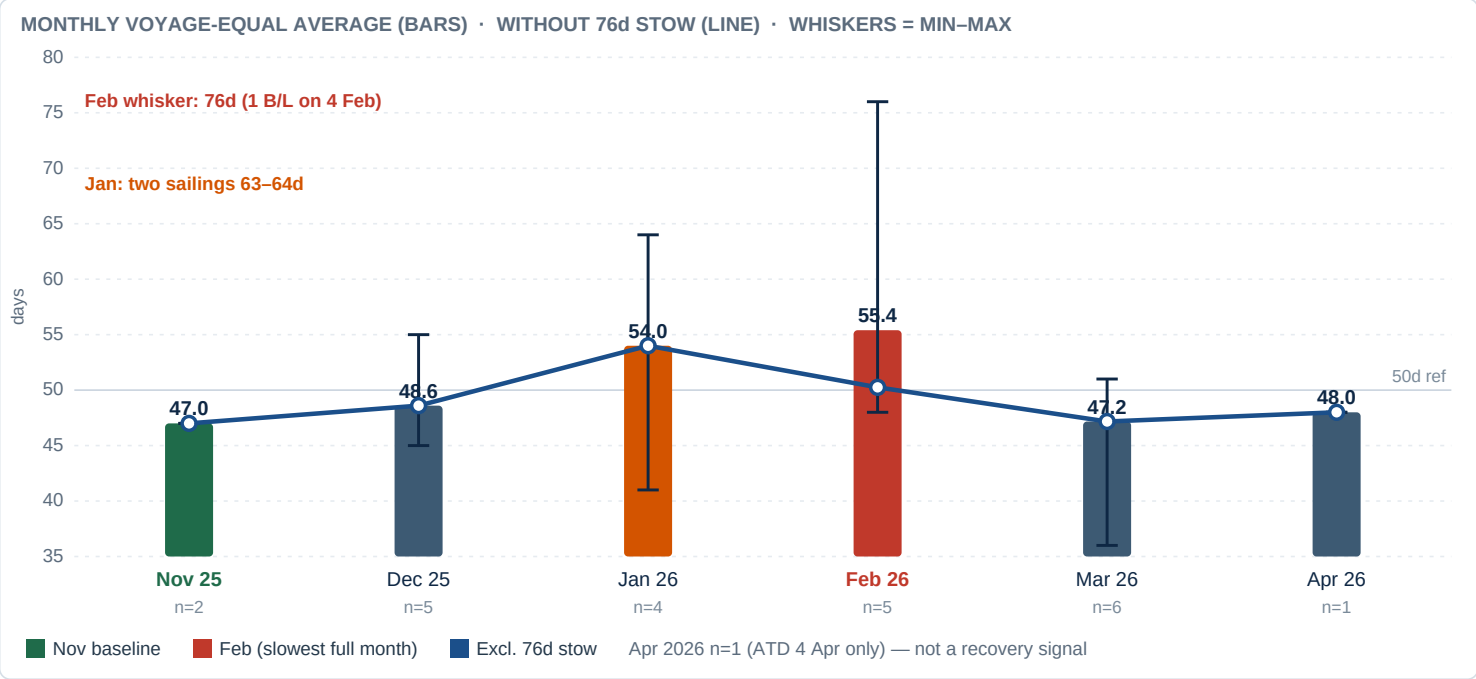

+8.4 d

+18% slower Nov → Feb

THE FLOOR MOVED

48 > 47

Every Feb sailing slower than every Nov sailing

Not just one slow ship
Feb minimum 48d is already above Nov maximum 47d. Jan adds two 63–64d sailings. The band moved before the 76d box.

Winter peak vs shoulder (voyage-equal)
Nov–Dec mean 48.1d (n=7). Jan–Feb mean 54.8d (n=9). Drop the 76d stow and Feb is still 50.3d vs Nov 47d.

80% coverage (factory CEILING rule)
Nov–Dec: 49d. All 23 voyages: 52d (85%=55d). Jan–Feb 80%=64d because of the 63/64/76 cluster — do not plan on 47d.

Ticket-weighted monthly AVG agrees
B/L-equal: Nov 47 → Jan 51.2 → Feb 52. Same direction. March 48.6 is pulled by one 36d B/L; April n=3 tickets only.

WHAT THIS MEANS

- On this extract, start internal sailing LT at 52 days (80% of 23 voyages) or 55 days (85%) — not the Nov 47d average.
- Door-to-Dushan = sailing + Yangshan customs + truck + WH posting — those legs are not in this page.
- Attachment 2 stops at ATD 4 Apr 2026. Do not treat April 48d as the new floor; May sailings are not in this file.

HOW TO READ THE SPIKES

- Jan 16 → 21 Mar = 64d; Jan 19 → 23 Mar = 63d. These are latest schedules, not original bookings.
- 4 Feb: 4 B/L stay at 49d (25 Mar); B/L 266220960 goes 76d (21 Apr). Same split-stow pattern as the GBLON whisker.
- 4 Mar: one B/L 36d (9 Apr) vs four B/L 48d (21 Apr). That 36d pulls March's voyage mean down to 47.2d.
