

Arrival lead-time is getting worse

NOV 2025 AVERAGE

46.4 d

5 HAM–SHA sailings · range 45–47

MAY 2026 AVERAGE

55.0 d

4 HAM–SHA sailings · range 53–58

CHANGE

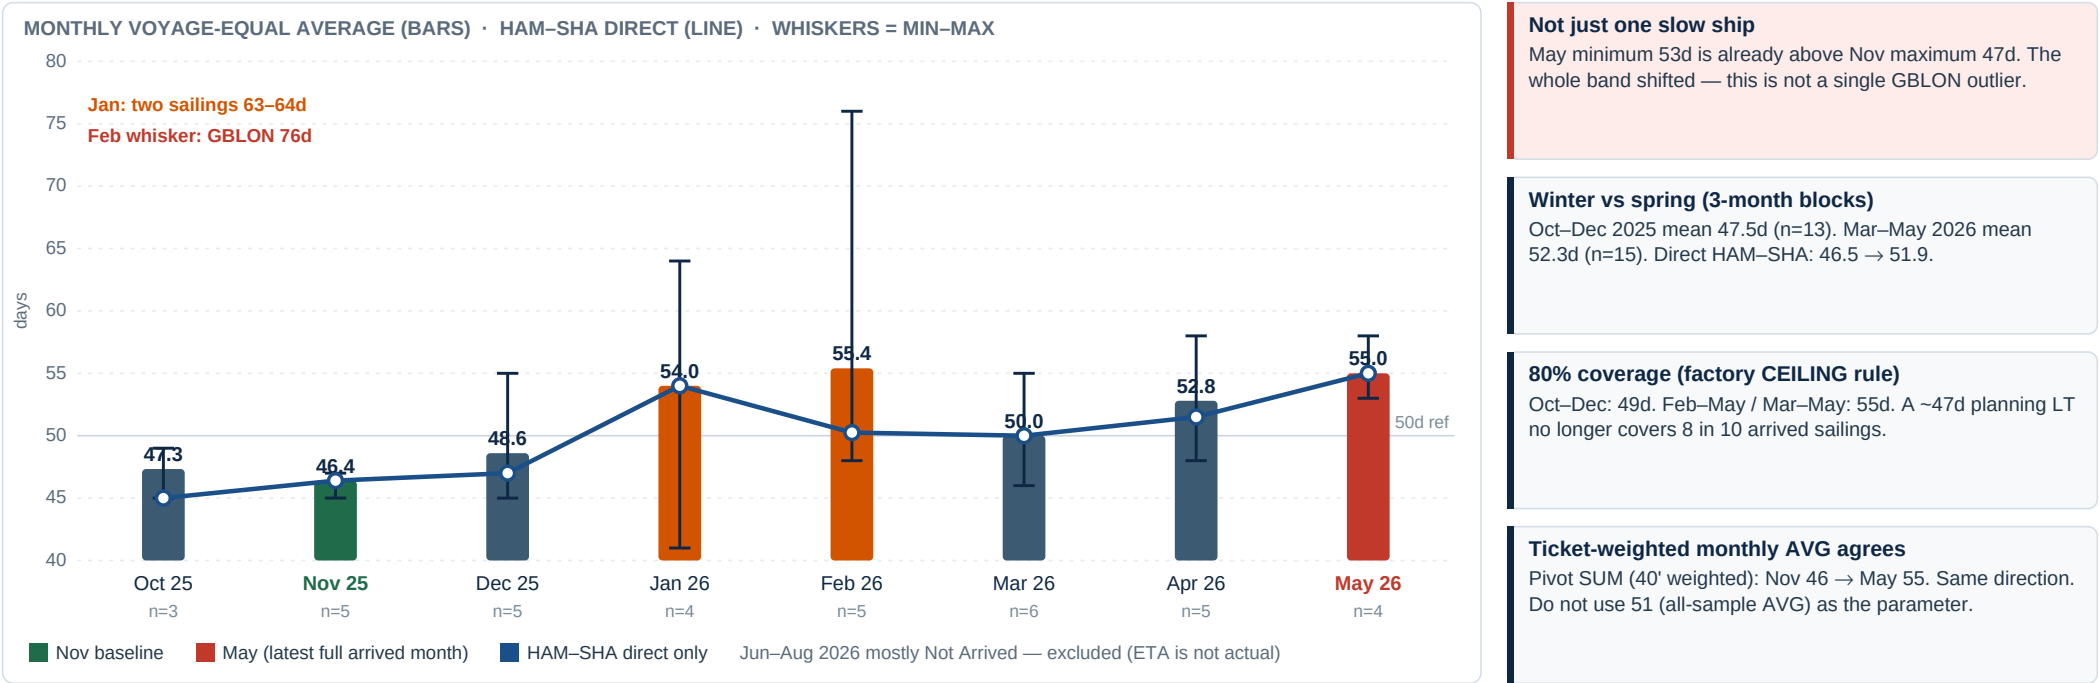

+8.6 d

+19% slower in six months

THE FLOOR MOVED

53 > 47

Every May sailing slower than every Nov sailing

WHAT THIS MEANS

- Internal sailing LT should start at 55 days (80% coverage), not the 2025 winter average.
- Door-to-Dushan = sailing + Yangshan customs + truck + WH posting — those legs are not in this page.
- Latest arrived sailing 1 Jun 2026 = 57d (n=1; month incomplete).

HOW TO READ THE SPIKES

- Jan 63–64d are HAM–SHA (not transshipment) — they lift Dec–May 90% coverage to 63d.
- Feb all-routes mean 55.4d includes GBLON 76d; direct HAM–SHA that month is 50.3d.
- Default HAM–SHA parameter still uses May 55d / 80%=55d — the worsening holds without transshipment.
