

Latest schedule lead-time is getting worse

NOV 2025 AVERAGE

47.0 d

2 sailings · both 47d · 5 B/L

JUN 2026 AVERAGE

64.7 d

7 sailings · range 57–71

CHANGE

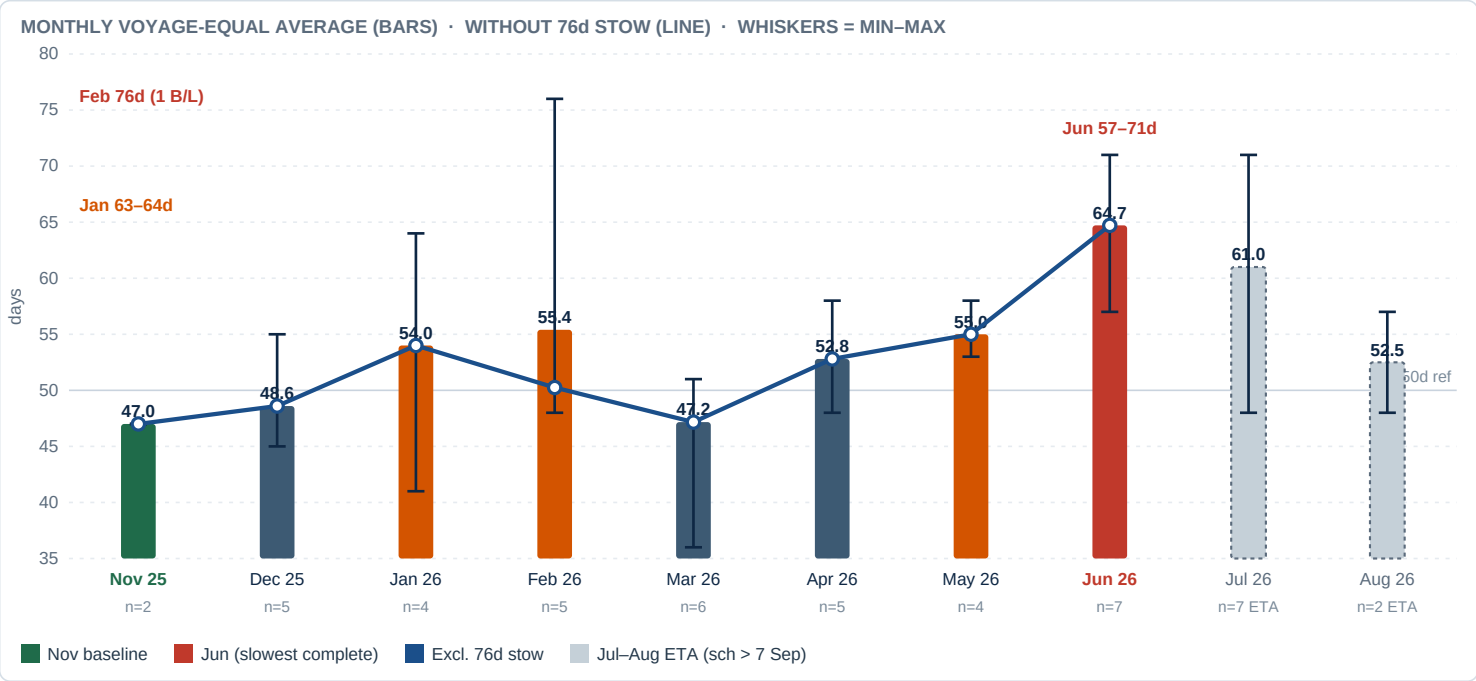

+17.7 d

+38% slower Nov → Jun

THE FLOOR MOVED

57 > 47

Every Jun sailing slower than every Nov sailing

Not just one slow ship
June minimum 57d is already above May minimum 53d and Nov maximum 47d. The band moved again after the May 55d step.

May still matches the 19 Aug page
May voyage-equal mean is still 55.0d (range 53–58, n=4). April is now complete at 52.8d (n=5).

80% coverage (factory CEILING rule)
Feb–May still 55d. Last 3 complete months Apr–Jun: 65d (n=16). Nov–Jun complete: 62d. Do not fold Jul–Aug ETAs into k.

Ticket-weighted monthly AVG agrees
B/L-equal: Nov 47 → May 55.2 → Jun 63.9. Same direction as voyage-equal 64.7d.

WHAT THIS MEANS

- If June Latest Schedule is treated as arrived, last-3-complete-months 80% is 65d (Apr–Jun) — not the Nov 47d average and not 55d from Feb–May only.
- Until ATA is confirmed, keep 55d on the table but do not plan as if 55 still covers June: every June sailing is already ≥57d.
- Jul–Aug bars are ETAs (schedule after 7 Sep). Do not read Aug 52.5d as recovery.

HOW TO READ THE SPIKES

- 4 Feb: 4 B/L stay at 49d; B/L 266220960 is 76d. Line drops only that stow.
- June splits: 7 Jun 59d vs 69d; 14 Jun 62d vs 65d; 9 Jun 71d; 22 Jun 70d. Floor is 1 Jun 57d.
- 4 Mar: B/L 264161585 is 36d vs four 48d the same ATD — that 36d still pulls March's mean to 47.2d.
